service. Being home on leave in February, 1915, he came to the Dispensary for re-examination. He was examined by Dr. Saner, who found signs of old healed disease, but no active trouble, and the patient has returned to the Front.

B.B., aged 20, a shop assistant, first attended on November 14th, 1913. He was found to have early active disease at both apices. He attended the Dispensary and was kept under observation for two weeks. During this period the patient was running an evening temperature of 99.2° F., being unable to rest in bed at home and Sanatorium treatment was advised. Before leaving for the Sanatorium the patient attended the Dispensary for six weeks in all. He gained in this time 4lbs. in weight.

He was treated at the Downs Sanatorium from January 9th to March 28th, 1914. His treatment there included graduated work. From sweeping paths and roads he proceeded to parsnip digging, carrying mould, and finally trenching.

On leaving the Sanatorium, he returned to the Dispensary, having gained 5¾lbs. in weight. As the disease was quiescent, and his temperature normal, a course of tuberculin was commenced. This was continued up to August, 1914, when the patient was accepted as medically "fit" for the Army, and so found his way to France.

Part III.

Social and Economic Conditions of the Patients.

The following Tables deal with the home conditions, occupations, social and economic circumstances of those patients who attended the Dispensary during the fourth year, and were found to have pulmonary and other forms of tuberculosis.

Table XI.

The homes of the 157 patients suffering from pulmonary or other forms of tuberculosis were situated as follows:—

Situation of Home.	
Several Floors	37
Top Floor (5th, 4th and 3rd)	11
Second Floor	26
First Floor	19
Ground Floor	6
Basement	7
Mews	1
Not Ascertained*	36
Total	157

* Includes Common Lodging Houses, homes outside the Borough, homes of domestic servants and others who did not desire that a visit should be paid by the Dispensary.

Table XII.

The housing accommodation of these patients was as follows:—

A.—23 patients were living in Homes of One Room as follows:—

Alone	5
With 1 other person	6
,, 2 ,, persons	6
,, 3 ,, ,,	4
,, 4 ,, ,,	–
,, 5 ,, ,,	2
Total	23
